

1. Print document in original size without scaling, outside edge of the marker measures 20 cm x 20 cm (7 7/8" x 7 7/8")
2. Carefully cut out the marker along the edges.
3. Mount the marker with clear adhesive tape, as straight and centered as possible into the desired window.
4. After initiating the MHZ.planer app and initiating the Live mode, select the small (20 x 20) marker size. This will allow the app to proportionally estimate the window shade size.

For professional repeat use, please request the self adhesive vinyl MHZ marker from your MHZ representative RS-SYLKO
